

Deep TMS Therapy: Veterans

At **BrainStim Health**, we are dedicated to providing cutting-edge, evidence-based treatments for **veterans and first responders**. Our mission is to enhance access to care and improve mental health outcomes through advanced therapies.

In collaboration with leading **regional mental health experts**, we are establishing specialized clinics in **Vancouver, Surrey, Ottawa, Perth, Halifax, and Kingston** to bring high-quality care closer to those in need.

Our programs leverage neuroplasticity through neuromodulation with **Deep Transcranial Magnetic Stimulation (dTMS)**, a non-invasive therapy that uses short magnetic pulses to stimulate brain neurons and regulate brain circuits. This approach, along with other specialized treatments, **supports long-term recovery, resilience, and daily functioning** for individuals facing chronic mental health challenges.

TMS uses short magnetic pulses to stimulate brain neurons and modify brain circuits. **Approved by Health Canada, FDA, & Veterans Affairs Canada**, it's an evidence-based treatment for treatment-resistant depression and mood disorders, offering a promising alternative for mental health management.

Conditions Treated with Deep TMS

- ✓ Major Depression Disorder (MDD)
- ✓ Depression and Anxiety
- ✓ Post Traumatic Stress Disorder (PTSD)
with Mood disorder
- ✓ Obsessive Compulsive Disorder (OCD)
- ✓ Addiction

TMS is highly effective for those who haven't responded well to medications.

How it Works

- ✦ **Machine Placement:** H-coil device is placed on the head to deliver magnetic pulses.
- ✦ **Magnetic Pulses:** dTMS uses a non-invasive machine to send gentle magnetic pulses to target deeper neural structures effectively.
- ✦ **Targeted Areas:** Uses magnetic fields to activate neural networks in the brain.
- ✦ **Non-Invasive:** No daily medications or their bothersome long-term side effects. Little to no downtime post-treatment.

TMS therapy uses magnetic pulses to stimulate brain regions, improving mood and behavior.

Most patients see a 50-60% symptom reduction.
